

SAV+R Foundation

Using RID Technology™

SAV+R Foundation is a foam insulation board designed to help reduce lateral pressure on foundations and at the same time offer thermal protection. This product has been tested and designed using Engineered EPS that incorporates RID Technology™.

REDUCE

Reduce Lateral Pressures by up to 40% using SAV+R Foundation. Lateral pressure pushes on the SAV+R board, stress reducers absorb this pressure thus saving your foundation.

INSULATE

Engineered EPS which provides a stable R-value for the life of the foundation. Available in R-5, 10 or 15

DRAIN

Easy Flow Drainage Pathways™ to move water quickly to the foundation drains.

LESS ISSUES. LONGER LASTING.

Foundation issues have long plagued the construction industry. Foundation cracks from heaving and stress loads have increased even more with additional R-value requirements. SAV+R™ has been designed and engineered to help foundations have less issues and last longer. This innovative product has the ability through integrated Stress Reducers to reduce lateral load by as much as 40%.
